Branch:	B.Tech CSE (Cyber Security)
Year:	1st Year
Course Code:	CSE0001
Date:	28 March 2026

Introduction

This project was assigned as part of the Digital Literacy course to help students understand and apply essential digital skills in real-world scenarios. As a Student Digital Ambassador, my role was to explore different aspects of digital literacy, including professional online presence, safe communication, and awareness of cyber threats.

"Through this project, I learned how to create digital content, build a professional portfolio, and understand cybercrime risks. These skills are essential for both academic success and future career growth."

Task 1: Digital Literacy Awareness Infographic

I created an infographic using **Canva** focusing on three main pillars: what digital literacy is, safe internet practices, and professional online presence.

The infographic explained digital literacy as the ability to use digital tools effectively and responsibly. I included tips on maintaining a professional online presence, such as keeping profiles clean and sharing useful content. This task helped me understand how to simplify complex ideas and present them in an engaging, visual way.

Task 2: Student Digital Portfolio

Building a professional online identity is critical. I updated three key platforms:

— **GitHub:** Repository for coding projects and technical documentation.

— **LinkedIn:** Professional networking and education history.

— **Kaggle:** Data science practice and competition participation.

On GitHub, I established a profile README highlighting my branch and learning goals. This task made me realize the importance of starting early and maintaining a consistent online presence.

Task 3: Coding & Collaboration Platforms

For technical growth, I utilized **HackerRank** for algorithmic problem solving and **Google Forms** for collaborative data collection.

Key Learnings: Collaboration

I created a "Digital Literacy Awareness Quiz" using Google Forms. This demonstrated how technology can be used for both personal learning and efficient data analysis via Google Sheets.

Task 4: Email Etiquette & Communication

Professional communication reflects a person's attitude and seriousness. I focused on common pitfalls, such as sending emails without subject lines or formal greetings.

Essential Professional Practices:

X Use a clear, concise subject line.

X Use formal greetings (e.g., “Dear Professor”). X

Maintain a polite tone and proper sign-off.

Task 5: Cybercrime Awareness

Researching cybercrime revealed the alarming frequency of UPI fraud and phishing scams targeting students. I have adapted my digital habits to be more cautious:

1. Verifying payment requests before approval.
2. Double-checking links before clicking.
3. Spreading awareness as a Digital Ambassador.

Conclusion

Overall, this project provided practical knowledge that will help me in my academic journey and future career in **Cyber Security**. I am now more confident in using digital platforms responsibly and guiding others to stay safe in the digital world.
